

A · g caliper: admissible band [0.0915, 0.1373]

B · Original calipers

U1	No	Yes	Yes	Yes
U2	No	Yes	Yes	Yes
U3	No	Yes	Yes	Yes
	g	m	m/r	p

Meets each criterion

C · g by map, difference from U0

I	-0.098	-0.109	-0.140
S8	+0.053	-0.084	-0.075
G4	+0.128	-0.023	-0.039
	U1	U2	U3

Descriptive breakdown: nats / token

$s_g = 0.022884$. The band is a design threshold, not a confidence interval.

Admission requires every caliper. The map breakdown does not replace the aggregate criterion.

Both batteries produce the same matching result; no admissible control under V1.
